

Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application.

Listing of Claims:

1. (CANCELED)
2. (CURRENTLY AMENDED) The mixing/charging port for medical treatment according to claim [[1]] 2, wherein the inner side surface of the seating is formed so as to have the same shape as the shape of the valve in a state in which the valve is depressed by the insertion of the insertion member.
3. (CURRENTLY AMENDED) The mixing/charging port for medical treatment according to claim [[1]] 2, wherein a groove is provided in the direction of the flow through the inner part of the mixing/charging port so that the bottom surface of the passage is located in a lower level to the bottom surface of the seating.
4. (ORIGINAL) The mixing/charging port for medical treatment according to claim 2, wherein a groove is provided in the direction of the flow through the inner part of the mixing/charging port so that the bottom surface of the passage is located in level to the bottom surface of the seating.
5. (ORIGINAL) The mixing/charging port for medical treatment according to claim 3, wherein the cross-sectional shape of the groove corresponds to the shape surrounded by the arc and chord at one of the opening part of the passage.
6. (ORIGINAL) The mixing/charging port for medical treatment according to claim 4, wherein the cross-sectional shape of the groove corresponds to the shape surrounded by the arc and chord at one of the opening part of the passage.
7. (NEW) A mixing/charging port for medical treatment comprising:

a disk-like valve having a slit that forms an insertion hole at the center,

a seating for supporting a rear surface of the periphery of the valve with the center of the rear surface of the valve left unsupported, the seating having a concave covered by the valve and a passage laterally passing through the concave, and

a cover for restraining the valve by covering a front surface of the periphery of the valve with the center of the front surface of the valve left uncovered, wherein:

an inner periphery forming a fitting hole of the cover works as an anchor for anchoring an insertion member to the mixing/charging port in a way in which the insertion member is fitted to the fitting hole when the insertion member is inserted into the slit,

wherein when the insertion member is inserted into the slit so as to split edges formed by the slit of the valve, a part along the edges is depressed by the insertion member, and a tip of the depressed part of the valve is brought into contact against an inner bottom surface of the concave of the seating.
